We are actually looking for a

(Junior) Developer.Net/Support Agent

Optimact: Who we are?

The Optimact Solution was built to support and facilitate customers. Designed to help companies, Optimact's cloud-based solution connects people, data, processes and plans across the enterprise, bringing different supply chain planning domains together.

We see Optimact as a tool to achieve a business goal: achieving results. Without addressing a number of external environmental factors, such as processes and organization, the best tool in the world will not deliver results. Optimact has therefore set up a toolkit that uses the tool as a means to achieve results.

More information can also be found at www.optimact.com

Function: What we are looking for?

As a (Junior) Developer you will support the further development of Optimact, mainly in .NET and SQL. You support the maintenance of the existing Optimact application. The wheel has already been invented, but together with our business consultants and developers, you ensure that it rolls and continues its journey to new horizons.

You have enough analytical insight to help you think about solutions and their implementation. We have an ambitious development plan that will make the most of your knowledge and experience.

As a Support Agent you are also in contact with the end users or other parties involved who have technical and / or ICT-related matters when using the Optimact web application.

You are involved in the daily management and maintenance of the IT environment within the organization. You will take care of backups and storage projects, logging problems and activities in the JIRA system (support and ticketing system), think about possible improvements in the field of customer support and system management and ensure the preparation and compliance of an up-to-date security policy.

You will report to our Senior Software Developer.

Your Profile: What we expect

Your profile:

- You have a bachelor's or master's degree in computer science or equivalent through experience

- You have experience with VB and C #

- You have experience with MS SQL Server

- You have experience with HTML, CSS, Java script and ASP.NET

- You know how to write quality code by means of to test

- You have experience with CI

- Experience with ERP systems or legacy systems is a plus

- You speak Dutch and English, French is a plus

- You are flexible, driven and a team player

- SCRUM experience is a plus

Our Offer: What you can expect

We offer a challenging environment with a lot of room for personal input to shape the business and the job, and grow personally in your profession.

We offer a competitive compensation according to your experience. Different possibilities in relation with contract types.
